

HOW TO USE THE DELONGHI COFFEE MACHINE

To use a De'Longhi capsule coffee machine, fill the water tank with fresh water, insert a compatible pod into the top slot, place a cup under the spout, and press your desired cup size button.

Step-by-Step Instructions

- **Fill the tank:** Use the glass jug in the cupboard to fill the water tank at the back of the coffee machine. Remove lid, fill and replace lid.
- **Turn on and heat:** The machine is plugged in already so the lights will blink while it heats up and turn steady when ready.
- **Insert a capsule:** Lift the top lever or slider completely, drop your capsule into the slot, and close the lever firmly.
- **Position your cup:** Place a cup or mug under the coffee outlet. Use a smaller cup for an espresso or a larger glass for a lungo.
- **Brew your coffee:** Press the **Espresso** button on the left hand side for a small shot or the **Lungo** button on the right hand side for a larger drink. The brewing will stop automatically.
- **Eject the capsule:** Lift the lever again after brewing to automatically drop the used pod into the internal capsule container.
- **Milk Frother:** Make sure the container is placed on the coffee machine. Remove lid & place a small amount of milk in the milk frother. Press the button on the front of the milk frother. It will light up red once it is working and will switch off when it is ready. Pour into your drink.

Button Functions

- **Left Button: Espresso** (40 ml short shot).
- **Right Button: Lungo** (110 ml long pour).
